

### **Best Practice -I: Green Campus Initiatives**

Dhenkanal Autonomous College is committed to sustainability through various eco-friendly initiatives. Each department hosts a floral garden, promoting biodiversity and student engagement. The Botany department maintains an herbal garden, supplemented by several seminars on medicinal plants. A rainwater harvesting system conserves water, while a composting facility converts organic waste into nutrient-rich soil. The college is planning to integrate solar power and energy-efficient infrastructure to reduce its carbon footprint. Green spaces, including parks and outdoor learning areas, enhance the campus environment. Sustainable practices extend to campus events, minimizing waste and promoting eco-friendly materials. Additionally, the Student Green Club leads awareness campaigns and sustainability projects, fostering environmental responsibility among students. These initiatives create a greener, more sustainable learning environment.

### **Best Practice -II. Staff Club for Faculty Well-being**

The Staff Club fosters a collaborative and engaging environment for faculty members. It encourages interaction beyond the classroom through meetings, seminars, and social events. Recreational activities, such as music performances and cultural celebrations, promote harmony and reduce stress. Faculty achievements are recognized through award ceremonies, enhancing motivation. The club also supports academic research by celebrating faculty milestones and inspiring further scholarly contributions.

The Staff Club plays a key role in cultivating a dynamic and inclusive work culture by promoting collaboration, professional development, and teamwork. These efforts align with the college's goal of academic excellence and overall growth. By enhancing faculty satisfaction, the club helps strengthen the college's reputation and contributes to a positive, thriving institutional environment.
